Subject Re: Status of 1121 Allene Ave. 

Byron,

I've spoken with Karen and Carolyn. EPA completed the disposal of the remainder of the containers and waste materials from the Site just last week. Sampling results from soils around the outside of the building showed low amounts of residual contamination, but the levels were not high enough to warrant additional emergency response action or sampling. Based on this, combined with the fact that the soils under the building do not pose an exposure risk, she determined that it was unnecessary for EPA to perform additional sampling under the building. Karen will be drafting her Final Pollution Report to document the completion of the emergency removal action, and I will provide you with a copy of that as soon as it is available. This now leaves the Site for remedial review, which has been initiated by Carolyn, but is currently in the hands of the state. Carolyn spoke with the state yesterday and they are near the end of their review, so she hopes to receive the PA from them by mid-July. We will keep you posted on further progress and determinations, but feel free to call if you have additional questions.

Subject Status of 1121 Allene Ave.

Karen,

I wanted to check on the status of 1121 Allene Avenue, also known as the J&W site. It appears that you have

10547020

finished up and moved out. Before I can move forward on my end, I need to know if there was contamination below the concrete floor of the building. It was indicated in prior conversations that there might have been leakage to that area and that the EPA would check the contamination levels of the soil below the floor. If you could share the results of such studies, I would appreciate it.

Thank you,

Byron
